

Evidence Based Dentistry

[Keywords] Evidence Based Dentistry

[Academics] Akihiko Tanimura

[Course aims]

In recent years, new materials and treatments in dental medicine, as well as clinical applications, have been developed as a result of innovation in the field. However, during daily clinical care, it is becoming important to not only diagnose accurately but also select the optimal therapy and materials according to each case. The choice of materials and treatment is left to the discretion of the dentist and requires precise knowledge and experience. The objective of this class is understand and apply EBM (evidence-based medicine) as a guide for selecting optimal materials and treatments across various cases.

[Course objectives]

The goals of this course are for the student to be able to:

1. Explain EBM
2. Select appropriate treatment based on EBM

[Course content]

Class	Theme	Content	Academics
1	About EBM		
2	EBM in practice		

[Class implementation method]

Combination of face-to-face learning and distance learning

* Class implementation depends on the implementation policy of each department (graduate school), interdisciplinary studies, and school.

[Grading policies]

Attendance, submitted assignments

[Textbook]

Specified during class

[Reference book]

Same as above
