Outline
We educate the broad knowledge and basic skills for oral and maxillofacial surgery, mainly concerning the diagnostic procedure, treatment technique and the perioperative patient management. We provide postgraduate courses of both basic and clinical research nature. The Oral and Maxillofacial Surgery Clinic treat with removal of wisdom teeth and management of facial trauma, facial deformity, temporo-mandibular joint disease, oral mucosal disease, benign and malignant tumors and dental implants.

Faculty members
Professor; Hiroki NAGAYASU D.D.S., Ph.D.
Associate professor; Masaru MURATA D.D.S., Ph.D.
Assistant professor/full-time lecturer; Hiroyuki KITAJYO D.D.S., Ph.D.
Assistant professor/full-time lecturer; Kaoru KUSANO D.D.S., Ph.D.
Assistant professor/research associate; Tomoya Sasaki D.D.S., Ph.D.
Assistant professor/research associate; Katsutoshi ITO D.D.S., Ph.D.
Assistant professor/research associate; Msahiro ISHIKAWA D.D.S., Ph.D.
Postgraduate students
Mamata SHAKYA D.D.S.

Main research in progress
1) Development of Bone Regeneration Materials
2) Bone induction using biogradation and bioabsorption of functionally graded apatites
3) Enhancement of tumor progression by genomic instability
4) Inhibition of tumor cell invasion by modifying cell to cell contact
5) Dental implants and alveolar bone augmentation.
